

Docket No. AUS920010003US1

ABSTRACT OF THE DISCLOSURE

METHOD, APPARATUS, AND PROGRAM FOR ANNOTATING DOCUMENTS TO EXPAND TERMS IN A TALKING BROWSER

5

A mechanism is provided in a talking browser that
uses an external annotation model to annotate a web page.
The browser downloads a resource description framework
(RDF) file along with the web page. The RDF file may
10 contain a list of acronyms in the document and the
talking browser transcodes the document and reads out the
expanded form of an acronym. The annotation could also
be extended to difficult words or concepts. Once a user
is familiar with the acronyms or difficult terms in a
15 document, the annotation may be disabled.
